7	Factory data reset	0-1	The default is 0 and adjusted to 1, then press and hold vertically for 2 seconds to save and exit	THE MIN THIP MAN

Frequently Asked Question

1. No display on the screen, no electricity

Check whether the USB cable is damaged, replace the USB cable for testing, and prohibit using a voltage higher than 5V for power supply.

2. No vehicle speed

The power-on satellite icon flashes to indicate the satellite search status. Underground parking lots, tunnels, under bridges, and when there are obstacles, it cannot connect to the satellite. Move the car to an open road and wait for the satellite icon to stop flashing, then it can be used normally.

3. Time Calibration

- 1. Adjust the time zone of your location when you do not receive satellites
- 2. After finding the satellite, adjust and synchronize with the local time

4. Inaccurate speed

Check whether the unit is correct, km KM/mile MPH, (speed unit switching reference setting 5 items)

When the car leaves the factory, the manufacturer increases the speed displayed on the dashboard by 5-7%.

Fine-tune the vehicle speed, if the instrument shows 100 Km/h, the machine shows 105Km/h, adjust the parameter value to 102

5. Wrong display of driving direction

When there is no speed, the satellite cannot identify your driving direction, and it can only be displayed normally when the speed exceeds 5KM/H

6. The speed is still displayed after the car stops

Underground parking lots, tunnels, and overpasses, when there are obstacles, the signal will be unstable and the satellite will drift. Please drive the car to an open road

7. Turn off the buzzer

Long press the button for 2 seconds to turn off the buzzer Press and hold again for 2 seconds to turn on the buzzer
